Živorad Milekić
Senior full-stack developer

Dedicated and efficient full-stack developer with 10+ years experience in software development. Experienced in both front-end and back-end technologies. Eager to learn new technologies, but also to share my knowledge with others.

I started with front-end work, but soon I found a need for knowledge of back-end technologies. At that time I began to develop more complex projects alone, so experience in both front-end and back-end were crucial for me.

Now I am working in a team of experienced developers, where everyone has their own field of expertise and we balance workload according to that. But I am still interested in every aspect of software development.

PROJECTS

CapitalWallet - Cryptocurrency payment gateway

Full-stack developer - Next.js, WooCommerce, System Architect

2023-08-01 - Present

CapitalWallet is a registered digital service provider enabling cryptocurrency payment for every major e-commerce web shops systems. My responsibilities were creating WooCommerce payment gateway to allow merchants to receive cryptocurrencies for their products and creating Next.js middleware to be main knot between merchant's web shops and platform's API to make payments on blockchain.

ZuluTrade - Copy trading platform

Back-end developer - Node.js, Tech lead

2023-05-01 - 2023-12-01

ZuluTrade is a part of FINVASIA Group company and one of the most innovative Social Trading and Wealth Management platform in the world. I worked on back-end team, rewriting microservices from Spring Boot into Node.js. I was one of the leads on the project. Responsible for every major decision, organising communication between microservices and trading bridges.

Facilitee

Front-end developer - React, Tech lead

2022-11-01 - 2023-04-01

Facilitee is the platform that enables a property owner to check their property's status at any time, approve service requests, and chat directly with the tenant, repair worker, or property manager. At the same time, the tenant can submit issues and service requests in their account. My responsibility was to set up frontend project from ground up. We used VueJS, React.js, Tailwind CSS and Storybook. Everything was organised in mono-repo tool called NX. Every major part of application was separate to dedicated library.

TryMe

Front-end developer - Angular, Tech lead

2022-07-01 - 2022-11-01

We developed a platform dependant solution, making it possible to try on different glasses and sunglasses on any device virtually. Our primary focus was developing a dashboard application in Angular for control solutions. It was also an AR solution in vanilla JavaScript as an embedded plugin for customers' websites to load glasses models and allow their customers to try them on virtually.

Snapi Payment processor

Full-stack developer WooCommerce + Node.js connector, System Architect

2021-12-01 - 2022-03-01

Snapi is integration to WooCommerce that allows customers to purchase products from website, simply by clicking on deep link or scanning QR-code. In which process wanted product is open in Snapi smartphone app, ready to be purchased in few easy steps. By purchasing product, Snapi system automatically create order in WooCommerce, marks it paid and makes it ready to be shipped to customer. I was part of small team of developers specialised in WooCommerce integrations. We developed Node.js connector that communicates with main system. Purpose for it was to balance workload from main system and only send crucial data for payment processing process. We also created WooCommerce payment gateway that communicates with Node.js connector and exchanges payment data.

Pixoff Contributify

Full-stack Next.js, System Architect

2021-04-01 - Present

It all started as a pet project. I wanted to create a service that prints out desired text in your GitHub contribution graph. I developed Next.js application that allows users to sign in with their GitHub account and choose wanted text. The chosen text will be written out by calculating how many commits should be generated on a specific date. After this, the application pushes the newly generated git repository to the user's GitHub account and desired text will be written out.

Resumo

Full-stack Next.js + WordPress, System Architect

2020-12-01 - Present

The idea of this startup project was to simplify the process of making resumes and personal websites. As a system architect, my responsibility was to construct the tech stack components and ensure they communicate correctly. The system's core component is a WordPress website that serves as a landing page and as a dashboard for users to insert all necessary data for their resumes. We use users' data from WordPress via Restful API, and then our custom made Next.js application presents collected data to the user's personalised website and PDF file.

Even Financial

Full-stack Typescript, Remote tech lead

2020-08-01 - 2022-07-01

As a full-stack developer, my duties were to develop both the back-end and front-end part of the tech stack. We used Nest.js as a framework for Restfull API for the back-end part. For the front-end, we used Next.js and Redux with Redux Saga. In each part of the tech stack, we used Typescript to ensure the best compatibility between the stack components.

For the position as the tech lead, my responsibilities were to make sure my teammates followed the code style that was already established and to ensure we used best practices and the latest code patterns.

NuVoxx Call center platform

Front-end Angular, Remote team lead

2020-05-01 - 2020-10-01

Developing a Call center platform for Canadian client. Working on the UI prototype for the new version of the app using Angular. Lead developer, managing a small team.

RESUMO

Zlatibor 360 iOS app

Full-stack Ionic Angular + WordPress

2019-03-01 - 2019-05-01

Developing a iOS 360 VR app using Ionic Angular. Back-end developed using WordPress as headless CMS.

Visit Tivat Android app

Full-stack Ionic Angular + WordPress

2018-11-01 - 2018-12-01

Developing an Android Tour guide app for the City of Tivat using Ionic Angular. Back-end developed using WordPress as headless CMS.

Pixoff Suite Internal management tools

Full-stack React.js + Node.js

2018-10-01 - Present

Developing in house software for internal processes. Suite includes: Invoice system, Team feedback system, Expancies sharing system, Check Ins system, Salary calculator system, always expanding... Using React.js and Ionic React in front-end, for back-end using Node.js with GraphQL.

ClipSync Desktop app

Full-stack Vue.js + Electron

2018-09-01 - 2019-01-01

Desktop app for synchronizing copy/paste between different clients. For client using Vue.js with Electron as a wrapper for cross-platform desktop apps, for back-end using Node.js with GraphQL.

AIFC information system

Front-end Angular, Remote team lead

2018-05-01 - 2020-03-01

Developing an information system for Astana International Financial Centre, part of a larger E-Government system. Working on the UI part of the app using Angular. Lead developer, managing a small team.

Switchboard Desktop app

Full-stack Vue.js + Electron

2018-01-01 - 2018-09-01

Developing a Desktop app for monitoring call activity within a hotel phone system, with a local network and UI for the reception desk. For client used Vue.js with Electron as a wrapper for cross-platform desktop apps, for system side used Node.js and Socket.IO.

Vuk System information system

Full-stack Wordpress

2017-06-01 - 2018-03-01

Developing an information system for car tuning company. Included features: Car management, Task management, Task image storage, Generating 0ffers and invoices and sending them to clients via email. Used WordPress as a monolith system. Planning with client on moving to a modern approach with React.js app and microservices.

Picturepark Content Platform

Front-end Angular.js with Typescript

2016-06-01 - 2017-05-01

Developing a digital asset management platform for Swiss company. For the front-end used Angular.js with Typescript.

anketar Polling site

Full-stack Angular.js + Custom PHP and MySQL

2014-10-01 - 2015-07-01

Created a polling site after finishing college. Tried to create my own start-up. For the front-end I used Angular.js, for the back-end I created a custom PHP API.

phpGodfather Dev tools

Full-stack Angular.js + Custom PHP and MySQL

2013-11-01 - 2014-07-01

As a student's project I created UI dev tools for generating PHP Classes by drag-n-drop app. I started learning Angular.js on this project. It was very challenging and also important later for my career. In the back-end I created a PHP system that was creating PHP class files.
